

¹ Intelligent Systems Division, ISI / USC; ² CI for Network Science Center, SLIS, IU; ³ Comp. Sci., UC Irvine

This research is partially supported by the National Science Foundation under IIS-0513650, and unrestricted funding from the Information Sciences Institute. The study was conceived by GAPCB; the topic modeling and label placement was performed by DN; graph creation and graphics rendering was performed by BH; PS, and PP provided significant input for theoretical and practical aspects of this study. We also acknowledge Katy Borner at IU for all of her generous support for this project.
